Conquest World

Goal 1 - Define the learning world and themed zones.
Establish the core concept of Conquest World as a single connected world containing 5 themed learning zones, each with unique educational mini games.

Goal 2 - Identify stakeholders and capture requirements.
Document stakeholder needs using elicitation techniques, sample questions, functional requirements, non-functional requirements and user stories.

Goal 3 - Prioritise features and establish project scope.
Use MoSCow, SWOT and feasibility analysis to define what the MVP must include, what can wait and what is out of scope.

Clear Objectives

1. Create a child friendly learning app concept with structured zones and mini games.
2. Ensure safety, curriculum alignment and parental visibility.
3. Build a foundation for the future sprints (UI, UML, gameplay logic, Jira setup.

SCOPE

In Scope

1. World concept and zone definitions. 2. Stakeholder analysis. 3. Requirements gathering. 4. MoSCoW as priority. 5. SWOT analysis. 6. Risk and feasibility. 7. Wireframe sketches. 8. UML diagrams. 9. Jira and Confluence setup.

Out Of Scope

1. Coding
2. Deployment
3. Backend systems
4. Real time multi-player
5. Open free roam world

Stakeholders

Kids aged 5-10 - Elicitation technique, observational sessions to see how they react playing certain games.

Why? Can physically see what type of activities they enjoy.
Sample questions - What part of this game did you enjoy the most? Was there anything boring or exciting about the game you tested today?

Parents/Guardians - Elicitation technique, Semi-structured interview.

Why? They care about safety, learning values, screen time and e-safety.

Sample questions - What kind of information about your child's progress would you like to learn most about? What kind of safety measures do you care about?

Teachers/Educators - Elicitation technique, focus group.

Why? They can discuss curriculum alignment and classroom use together.

Sample questions - How might a game based app support what you already teach in class? What would stop you from recommending a learning game to your students?

The app is a single connected world with themed zones:

- World of patterns - logic, sequences, matching
- Crystal caves - math puzzles, shapes, spatial reasoning
- Story world - reading, comprehension, vocabulary
- Robot factory - problem solving
- Sky kingdom - creativity, drawing, storytelling

Each zone could have mini games based on the above. Math puzzle - fixing a broken bridge by choosing the right stones.

Reading task - help villagers find the right item based on clues

Spelling challenges - completing a task by spelling the magic word

ROADMAP

Sprint 1 - Concept, stakeholders, requirements, MoSCoW, SWOT, UML, wireframes etc.

Sprint 2 - Drag and drop mechanics, spelling challenge, animations and sound

Sprint 3 - Zone mini game designs, UI screens, level progression

Sprint 4 - Final documentation, presentation, refinement

Strategic Thinking

Conquest World blends learning with game based engagement.

Each zone targets a core skill:

Patterns = logic

Crystal Caves = maths

Story World = spelling and reading

Robot Factory = problem solving

Sky Kingdom = creativity

Alignment with Organisational Objectives/SDG's

Aligns with SDG 4 - Quality Education

- Accessible learning
- Foundational literacy and numeracy
- Safe digital environment
- Encourages creativity and problem solving

School Objectives

- Curriculum aligned learning
- Safe digital tools
- Engaging educational content
- Parent visibliity

Swot Analysis

Strengths Internal:

- Positive attributes and competitive advantages within your control. Strong themed zones. Game based learning. Safe, structured environment. Clear educational outcomes.
- Allows young children to engage in learning without realising that they are learning as they just think of it as a fun game they get to play

Weaknesses Internal:

- Negative factors or limitations that hold you back.
- No deployment. Limited time. Requires strong documentation.

Opportunities External:

- favorable trends or market changes you can exploit.

Threats External:

- Uncontrollable risks or obstacles posed by the environment.
- Time challenge.
- Competing apps and competition.
- Scope creep.

Balanced Scorecard

Learning and Growth - Develop mini games that teach core skills. Build a safe, child friendly environment

Internal Processes - Clear requirements. Structured zones. Agile sprints.

Customer (Parents/Teachers) - Progress dashboard. Safety features. Curriculum alignment.

Financial (Future) - Potential subscription model. School licensing.

Portfolio Management

Conquest World fits into the “Educational Innovation” portfolio. It is low risk, high value and scalable.

Long Term Goals

- expand zones
- add more mini games
- build parent dashboard
- create teacher analytics
- potential commercial release

Short Term Goals

- define zones
- build drag and drop mechanics and sort out spacing etc
- create spelling challenge - thought about a Wheel of Fortune vibe spelling words from a bunch of letters but then using that word to put into a sentence for bonus points.
- produce UI mockups
- create UML diagrams

Power Interest Grid

High power/High interest

- teacher/assessors
- product owner

High Power/Low Interest

- school administration

Low Power/High Interest

- kids
- parents
- teachers

Low Power/Low Interest

- general school community

Deliverables (SPRINT 1)

- Zone description
- Stakeholder analysis
- Requirements list
- MoSCoW table
- SWOT analysis
- Balanced scorecard
- Power interest grid
- Wireframe sketches
- UML Diagrams
- Jira and Confluence setup
- Sprint 1 summary document

Timeline

Sprint 1 Week 5

Sprint 2 Week 7

Sprint 3 Week 9

Sprint 4 Week 11

Resources

- Confluence
- Jira
- UML tools
- Wireframing tools - Figma etc.
- Stakeholder interview notes

Communication Plans

- Weekly sprint meetings
- confluence documentation
- Jira task updates
- mobile phone group chats
- Teams meeting and group chat

Risk Management Plan

Risks

- scope creep
- too much complexity with mini games
- time pressures
- communication challenges
- health risks
- misaligned requirements

Mitigation

- MoSCoW
- clear sprint boundaries
- early stakeholder feedback
- simple UI and mechanics of how things work

Project Selection Criteria

- educational value
- feasibility
- safety
- engagement
- curriculum alignment
- time constraints

Conquest World meets all criteria

Cost Benefit Analysis

Costs

- time
- design effort
- documentation

Benefits

- strong educational value
- high engagement
- scalable concept
- potential commercial viability

Feasibility Study

Technical

- highly technical

- simple 2D mini games, use drag and drop mechanics and simple operational load

Operational

- high - fits school learning goals.

Economic

- high - low cost to design, high potential value.

Functional Requirements

1. App must provide interactive quests and mini games that incorporate learning tasks.
2. Track progress and reward positive learning outcomes with some kind of collectible reward on the screen.
3. Must allow parents to view vital statistics like screen time, levels completed and skills practiced.

Non-Functional Requirements

1. Simple interface that a child aged 5 and up can navigate without getting confused by the instructions.
2. Cannot have external ads, open chats or data sharing without parental consent.
3. Have a time limit of how much game time a child can play before the game shuts down. Example, 10 minute time limit then games turns itself off forcing the child to take a break.

User Story

As a parent I want to see a simple summary of my child's progress in the app so I can understand what they are learning and how often they play.

Part of the acceptance criteria was to ensure the child is learning something and not just playing games. Measured curriculum outcomes and game outcomes.

🎯 MoSCoW

Must have:	• Game based learning quests, multi level learning progression • Safe and child friendly
Should have:	• Rewards and progression • Parent dashboard
Could have:	• Character customisation • Multiple themed worlds not just 1
Not in scope:	• Real time multiplayer mode

	• Open free roaming world. Structured zones and quests are easier to design and test early.

Justification for top 2 must haves

1. Without quests or mini games it risks becoming neither a game or a learning tool.

2. Parents or schools will not adapt the game if it's not safe and appropriate for age levels. Safety is essential for trust.

Requirements Elicitation Methods

Kids aged 5-10 - Elicitation technique, observational sessions to see how they react playing certain games.

Parents/Guardians - Elicitation technique, Semi-structured interview.

Teachers/Educators - Elicitation technique, focus group.

Analysing and Prioritisation Requirements

Categorisation (must-have, nice-to-have, out-of-scope)
